

“The Procurement scheme offers the opportunity to gain insights into different EDF teams, study for a qualification and join a company committed to helping Britain achieve Net Zero.”

Christy Siu, Procurement Graduate

What experience will I gain during the Procurement programme?

During your training you'll complete two-year training programme. These assignments will offer the opportunity to lead and support procurement and supplier management activities to ensure goods and services are delivered safely, are high quality, arrive at the right time and at the best price possible.

What kind of placements will I complete?

The programme is designed to help you develop a broad set of skills, with the opportunity to specialise towards the end of the programme when you'll start to think about a permanent role.

You'll gain insights into the wide range of suppliers who provide crucial works, goods and services to support the efficient running of our business and complete a tailored training plan that will develop your skills and build your confidence, knowledge and experience.

You will have exposure to multi-million business critical contracts, support sourcing and procurement activities, understand governance requirements and you will have ownership for your own category of services.

During the programme, you'll work towards gaining a Level 4 qualification in Procurement and Supply practices through the Chartered Institute of Procurement and Supply (CIPS), an industry wide recognised qualification. This qualification will provide you with a broad understanding, tools and insight to best practice in procurement and knowledge that you'll be able to apply immediately in your workplace at EDF.

You'll also have mentors and industry experts to give you advice along the way and help you with decisions about your future career path.

Throughout the programme, you'll be working flexibly and have the chance to explore a variety of our sites, immersing yourself in the diversity of our business.

Helping Britain achieve Net Zero with our Supply Chain

At EDF we're driving positive social and environmental change throughout our supply chain as we works towards a net zero future. Here are some of the ways we'll achieve this:

Net-zero environmental impact

- Sustainable design and materials
- Waste management

Increase energy efficiency

- Using less energy
- Switching to low carbon

We will aim to eliminate the use of all non-essential single-use items

- Reusable, recyclable or compostable
- Reduced packaging

Enhance social value

- Real Living Wage
- Local sourcing
- Supporting local communities

Innovate with our suppliers

- Challenge the status quo
- Seek innovation, collaborate and share
