Published by:
Somerset Council in partnership with EDF Nuclear Generation Ltd in
accordance with the Radiation (Emergency Preparedness & Public
Information) Regulations (REPPiR) 2019.

OFF-SITE NUCLEAR EMERGENCY INFORMATION

This information describes how a radiation emergency at Hinkley Point B might affect you as a local resident, visitor or worker and has been issued by Somerset Council in accordance with the Radiation (Emergency Preparedness & Public Information) Regulations (REPPiR) 2019.

Please retain this information for future reference.

Nuclear power stations are designed, operated and regulated to ensure that any accidents are highly unlikely. However, it is prudent to have arrangements to deal with such a situation should it occur.

This information advises you of these arrangements and explains what you may need to do in the event of an emergency to protect yourself from exposure to radiation and radioactive material.

CONTENTS

1. Facts about ionising radiation and its effects on persons and the environment
2. Types of radiation emergency that could occur and their consequences
3. Protective actions to alert, protect and assist the public in the event of a radiation emergency
4. Information on protective actions to be taken by the public in the event of a radiation emergency
5. Arrangements for specific groups of people
6. After an event
7. The authorities responsible for implementing protective actions
8. Public Information Zone (PIZ)
9. The Detailed Emergency Planning Zone (DEPZ)
10. The Outline Planning Zone (OPZ)
11. Security information

STABLE IODINE TABLETS

Removal of Stable Iodine Tablets – Public health experts and EDF agree that because there is no longer nuclear generation at the station, the levels of radioactive iodine decline, and are now at negligible levels. This means that there is no longer sufficient radioactive iodine present to pose a risk to people's health, in the unlikely event of an accident at the site. Therefore, stable iodine tablets will no longer be recommended as a protective action.

Stable iodine can only be prescribed and issued to individuals as part of nuclear off-site planning if there is evidence of a threat to health that requires this protective action; this is no longer the situation at the Hinkley Point B site.

New occupants of these premises can apply for additional copies of this information from;

in the first instance,

1

FACTS ABOUT IONISING RADIATION AND ITS EFFECTS ON PERSONS AND THE ENVIRONMENT

The basic facts about ionising radiation and its effects on persons and the environment are detailed in the UK Health Security Agency leaflet **Basic Concepts of Radiation** which is included with this information.

This leaflet is also available on-line at www.gov.uk/government/publications/nuclear-emergencies-information-for-the-public/basic-concepts-of-radiation.

Further information on radiation, its effects and risks can be found on-line at www.gov.uk/government/collections/radiation-detailed-information.

2

TYPES OF RADIATION EMERGENCY THAT COULD OCCUR AND THEIR CONSEQUENCES

The likelihood of a radiation emergency occurring at Hinkley Point B is very low and there are a significant number of safety barriers in place to prevent the uncontrolled release of radioactive material to the environment. Hinkley Point B has never had a radiation emergency; however, accidents have occurred elsewhere in the past when radioactivity has been released from other sites around the world.

If a radiation emergency were to occur at Hinkley Point B, it would be most likely to take the form of a release of gas containing small amounts of radioactive particles.

In this instance, people could be exposed to radiation in the following ways;

- Breathing in radioactive materials.
- Direct exposure to radioactive materials that are carried in the air or are deposited on surfaces.
- By eating or drinking uncovered foods or liquids which have been exposed to radioactive materials.

During a radiation emergency of this type the weather may play a significant role in the spread of radioactive materials. In particular, the wind direction and speed on the day will determine the areas affected and where radioactive materials may be deposited.

Sections 3 and 4 give direction on the actions that can be taken to protect against the risks from exposure to radioactivity.

PERCEIVED RISK

The two nuclear reactors at Hinkley Point B Power Station (HPB) were shut down for the final time in August 2022.

EDF are removing the used fuel from the site and are preparing for the decommissioning of the nuclear power station.

Once the site has been declared fuel free Somerset Council and EDF will work together to reassess the risks and make the appropriate changes to the emergency arrangements.

In the unlikely event of a radiation emergency at HPB during defueling, the emergency response will be co-ordinated by Somerset's emergency services, local authority, health authorities and the Environment Agency, supported by the site operator and various national agencies.

In addition, emergencies could take place on the site, such as fires, or industrial incidents that could generate smoke or require the attendance of large numbers of emergency services vehicles.

These would not necessarily involve a radiological hazard and therefore you should not take any protective actions unless you are advised to do so.

All protective actions carry with them a risk of harm. Therefore taking unnecessary actions, such as evacuating, when there is not a risk from radiation, is not justified.

Hinkley Point C is currently under construction and cannot generate a radiological hazard to the public.

3

PROTECTIVE ACTIONS TO ALERT, PROTECT AND ASSIST THE PUBLIC IN THE EVENT OF A RADIATION EMERGENCY

WARNING

If there is an off-site nuclear emergency, the primary means of notification will be by:

- automated telephone notification system (if you have registered your details*)
- announcements through local and social media outlets
- direct communication from members of the emergency services.

* Please refer to the attached **EDF Public Emergency Telephone Information System letter** and **Sign-Up Card**.

SHIPPING AND BOATS

The Coastguard will warn shipping and boats.

SITE SIRENS AND EMERGENCY SERVICE VEHICLES

The site emergency alarms are tested weekly and as part of site emergency exercises. Hearing an alarm from the site is not an indication an event is occurring. You should not take action on the basis of hearing an alarm and it is not part of the incident notification process. Local residents and businesses would be alerted to the need to take action by the activation of PETIS (see attached letter and sign-up card).

Emergency services vehicles regularly attend the site for training and exercising and for low level incidents such as staff illness. The presence of emergency services vehicles at site is not an indication that an incident is occurring. You should not take action on the basis of emergency service vehicles attending the site.

THE HINKLEY POINT B OFF-SITE EMERGENCY PLAN

Somerset Council is responsible for the development of the off-site emergency arrangements for Hinkley Point B, as required by the Radiation (Emergency Preparedness and Public Information) Regulations 2019 (REPIR 2019).

The **Hinkley Point Nuclear Licensed Sites' Off-Site Emergency Plan** sets out the detailed planning arrangements to provide prompt protection to members of the public in the area.

4

INFORMATION ON PROTECTIVE ACTIONS TO BE TAKEN BY THE PUBLIC IN THE EVENT OF A RADIATION EMERGENCY

In the event of a radiation emergency occurring, you will be provided with advice on what action to take, via the methods identified in section 3. There are three primary protective actions that could be applied depending on the specific emergency scenario;

- Sheltering/staying indoors.
- Avoiding consumption of contaminated food/drink.
- Evacuation/leaving the area.

The initial message will be to:

GO IN

STAY IN

TUNE IN

SHELTERING/STAYING INDOORS

Staying inside with doors and windows closed is an effective method of protection from breathing in radioactive material in the air outside and from direct radiation from radioactive material in the air and on the ground.

If directed to shelter/stay indoors....

People at home/at their place of work should:

- go indoors
- bring domestic pets indoors
- leave all farm animals where they are
- close all outside doors and windows
- switch off any ventilation systems or extractor fans that are not safety critical
- tune into your local radio/TV and listen for any further instructions
- monitor official social media accounts.

People not at home/at their place of work:

- if you are indoors, remain where you are
- if you are outdoors, make your way to a nearby premises where you can remain indoors
- if you are travelling in a vehicle, ensure all windows and vents are closed and leave the PIZ by a route that does not take you closer to the station, ensuring you observe any access restrictions in place. Alternatively, seek shelter in a permanent building.

People outside the affected area:

If you live/work within the Public Information Zone but are not in the area when an incident occurs you **should not return** to the area until advised that it is safe to do so if at all possible.

AVOIDING CONSUMPTION OF CONTAMINATED FOOD/DRINK

In the event of a radiation emergency at Hinkley Point B, radioactive material could be deposited on uncovered food/drink, which could then be ingested. It could also find its way into foods through crops and animals.

Food, drink and medicines

If a radiation emergency occurs it is safe to continue to use:

- food stored indoors, for example in homes or shops
- medicines stored in their normal packaging
- mains tap water, unless told otherwise.

You should wait for official guidance before:

- using private water supplies
- consuming food stored outdoors, for example on open-air markets or stalls
- harvesting fresh produce to eat, for example from a garden or allotment.

Food production

- The Food Standards Agency is responsible for providing advice on food safety in the event of a release of radioactivity.
- If a radioactive release occurred, radioactive material could contaminate food production (for example, crops in fields, allotments or animals eating contaminated grass) over a wide area.
- The Food Standards Agency's advice will protect those people who may consume this contaminated food on a regular basis and over a long period of time. The area covered by food advice is therefore likely to be larger than the area in which other protective actions are required.

EVACUATION/LEAVING THE AREA

In the event of a radiation emergency at Hinkley Point B, it **may be** necessary to ask people to leave the immediate area. However this carries with it an element of risk and therefore would only be done in situations where the risk posed by the radiation hazard outweighs the risk of moving people out of the area. You should not expect to be evacuated as in most situations staying indoors would provide more than adequate protection from radiation.

In preparation for leaving the area:

- tune into the public broadcast information and listen out for instructions on leaving the area
- get together the people in your household/place of work (excluding children at school) and pets
- pack a supply of appropriate clothing
- pack any special food that anyone needs
- pack any medicines that anyone needs
- take personal documents and valuables
- pack some books and toys for children
- complete the Evacuation Registration Card.

If you are asked to leave the area:

- listen to the public broadcast information for news on which rest centres have been designated as the most appropriate for immediate use
 - take your completed Evacuation Registration Card with you
 - make sure fires are out and that cookers, ventilation fans, TVs etc. are turned off and unplugged
 - close all internal doors
 - leave a white sheet hung up inside a front room window to denote you have left the premises
 - lock up your property
 - leave using your own transport, keeping windows and ventilation closed. If this is not possible **you will be told** where transport will be provided
 - go to the designated rest centre
 - unless otherwise directed the designated rest centres can be found inside the front cover of this calendar.
 - a rest centre is set up to provide temporary accommodation for people who have been affected by an emergency and is a place of safety where any welfare or social needs can be met for a short period of time. If required, arrangements will be made for longer-term relocation.
- or
- go to a friend or relative's home if it is outside the evacuation area, following any official advice for attending a Radiation Monitoring Unit before you leave the area. Please inform the police of your location with the Evacuation Registration Card.

Contamination Monitoring

Depending on the exact nature of the incident, the response organisations may decide to set up a Radiation Monitoring Unit to check members of the public for radioactive contamination. If this happens, you will be given instructions on where to go and when you should attend. **If you are advised that contamination monitoring is necessary, you should not leave the area until you have been monitored, unless given other specific instructions.** This is to stop the potential spread of contamination to other areas and to other people.

5

ARRANGEMENTS FOR SPECIFIC GROUPS OF PEOPLE

SCHOOL CHILDREN

The Local Authority may help to coordinate special arrangements for children at school and for reuniting them with their families.

Please do not go and collect children from school unless otherwise instructed by the relevant school or public messaging from Somerset Council or Police.

PETS

If you are advised to leave and circumstances permit, take your pets with you. If possible, bring pets in a transporter such as a cage or basket and leave them in the car during registration. If they are left behind seek advice at the designated rest centre.

VULNERABLE PEOPLE

Persons being cared for in premises known to the local authority or health authority and who would have difficulty leaving the area will have special arrangements made for them.

If you have any form of impairment (e.g. you have difficulty in reading, hearing or mobility) and feel you may need assistance in an emergency situation please discuss this in the first instance with your usual care provider or trusted care individuals and agree an emergency plan with them.

Somerset Council has a legal duty to prevent, reduce or delay the need for care and support. This includes making sure we support people early and helping them to understand how and where they can help themselves. We want to provide easy-to-find, understandable information to help you make choices and decisions about care and support.

Further advice is available on the Somerset Council's Social Care page <https://www.somerset.gov.uk/care-and-support-for-adults> or by telephone: **0300 123 2224**.

VISITORS/TRADESPEOPLE

You should ensure that any visitors/tradespeople are made aware of these emergency arrangements. This should include guests or people working at/on your premises.

6

AFTER AN EVENT

After the initial phase of a radiation emergency has concluded, recovery activities may continue for a significant period of time.

You will be provided with information on any actions you need to take, but you should be aware that it may be necessary to place some restrictions on normal every day activities such as spending time outdoors.

If you have been asked to leave the area during the incident then you will be told how and when it is safe for you to return.

Information from the emergency services will continue to be given over media outlets until more formal community engagement channels are set up.

7

THE AUTHORITIES RESPONSIBLE FOR IMPLEMENTING PROTECTIVE ACTIONS

The police are responsible for implementing protective actions for the public. This will initially be on the advice of EDF. As the emergency response develops, a multi-agency group will take over responsibility for the provision of advice on protective actions.

The following organisations are involved in the emergency arrangements for Hinkley Point B:

- Avon & Somerset Police
- Cabinet Office
- Civil Nuclear Constabulary
- DEFRA CBRN Recovery Team
- Department for Energy Security and Net Zero
- Department for Environment, Food & Rural Affairs
- Devon & Somerset Fire & Rescue Service
- EDF Nuclear Generation
- EDF Nuclear New-Build
- Environment Agency
- Food Standards Agency
- HM Coastguard Western Region
- Met Office
- Ministry of Defence
- Ministry of Housing, Communities and Local Government
- NHS England
- Nuclear Restoration Services (NRS)
- Office for Nuclear Regulation
- Somerset Council
- Somerset Integrated Care Board
- Somerset NHS Foundation Trust
- South Western Ambulance Service NHS Foundation Trust
- UK Health Security Agency
- Welsh Government
- Wessex Water plc
- Yeovil District Hospital NHS Foundation Trust

8

PUBLIC INFORMATION ZONE (PIZ)

In the area up to 3.5km outside the new 800m DEPZ, there is no longer an automatic need to take shelter.

This is now the Public Information Zone (PIZ) in which residents will continue to be informed of any significant event on site (see green line on the map in Section 9).

The annual Hinkley information calendar will continue to be issued to all residents within the 3.5km PIZ and EDF's Public Emergency Telephone Information System (PETIS) will continue to be available for all residents who choose to sign up, and who reside within the 3.5km PIZ.

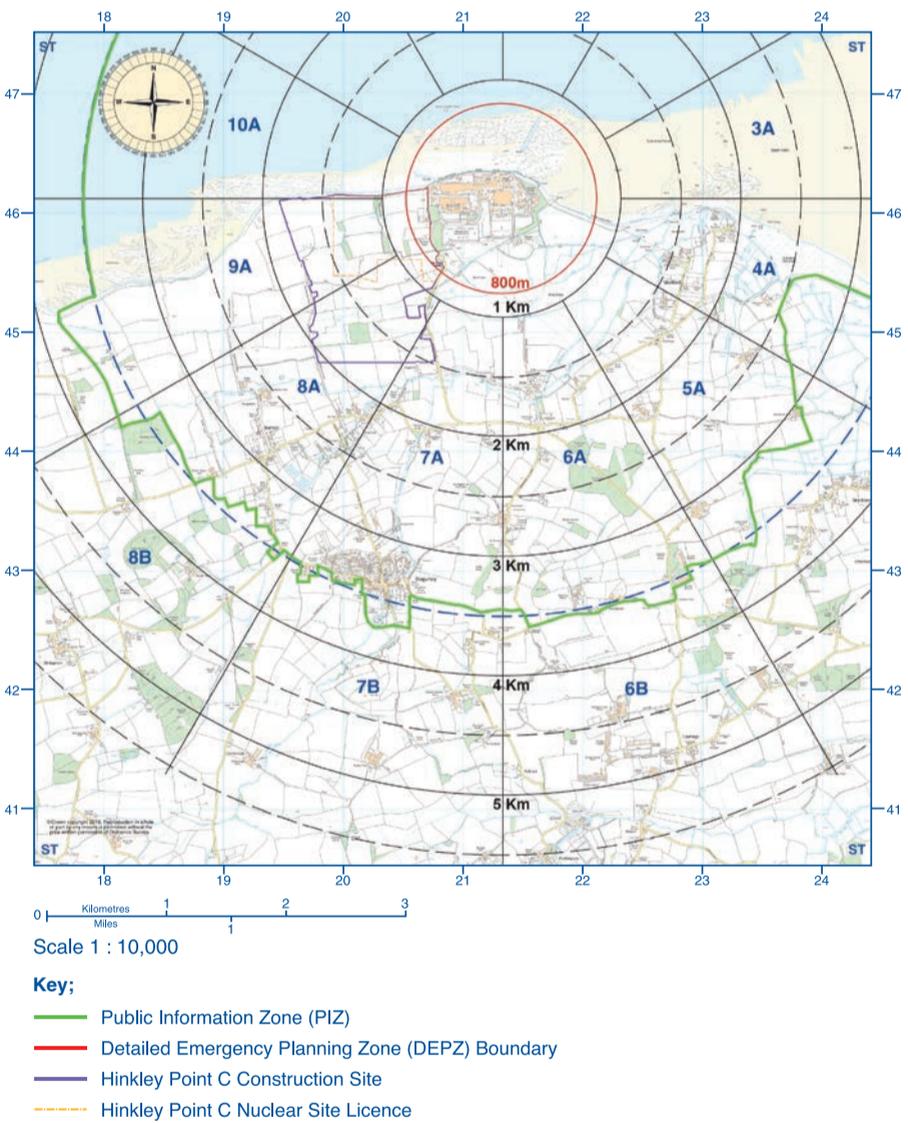

9

THE DETAILED EMERGENCY PLANNING ZONE (DEPZ)

The Detailed Emergency Planning Zone is centred on Hinkley Point B and extends roughly 800m.

Somerset Council is responsible for determining the DEPZ on the basis of information supplied by EDF. This information can be found in the Hinkley Point B Consequences Report, which is available here: www.somerset.gov.uk/health-safety-and-wellbeing/radiation-emergencies

The DEPZ is shown outlined in red on the map below:

10 THE OUTLINE PLANNING ZONE (OPZ)

The Outline Planning Zone is centred on Hinkley Point B and extends 30km in all directions. The OPZ is an area within which a framework exists for the response to an extremely unlikely but higher consequence incident.

11 SECURITY INFORMATION

We have numerous security arrangements in place at our power stations in order to reduce the risk of physical and cyber threats to our operations.

The Civil Nuclear Constabulary (CNC) is a specialised armed police force whose role is the protection of civil nuclear sites and nuclear materials. You may see CNC officers patrolling areas around the power station.

The site security control room is staffed 24 hours a day, seven days a week by EDF security guards and members of the Civil Nuclear Constabulary.

If you see any suspicious activity occurring in the vicinity of the power station, please notify site security immediately on the telephone number below.

Site security 01278 65 4604

UK anti-terror hotline 0800 789 321

SUSPICIOUS BEHAVIOUR

Examples of suspicious activity may include:

- people using recording equipment (such as mobile phones), or seen making notes or sketches of security details
- people loitering at or near premises for long periods and watching staff, visitors and deliveries for no apparent reason
- someone paying close attention to the power station perimeter fence line or entry and exit points
- people in stationary vehicles watching a building or structure
- vehicles moving slowly near buildings or structures, or parked in suspicious circumstances
- people asking you unusual questions about the power station, such as business operations, facilities, security or parking for no apparent reason.

Further information can also be found at <https://www.protectuk.police.uk/advice-and-guidance/risk/recognising-terrorist-threats>.
