Combwich Wharf Refurbishment
Update: February 2021
Overview of Main Work Areas

Over the next few weeks, plant which is no longer needed will be removed from site. Including this large crane which has supported the piling works.
Progress Update

• Since our January update, our focus has remained on finishing the installation of piles on the Abnormal Loads Quay. The majority of piles have now been installed with less than 10 to go.

• We’re beginning the metal works, securing the top of the piles into concrete which will provide better structural support for the Abnormal Loads Quay. The next step will be to construct the new Transfer Slab, which is an important element of the Abnormal Loads Quay as it will be the main area in which parts will be offloaded from the barge.

• Over the next few weeks you’ll see equipment which is no longer needed being removed from site. This includes the drilling plant which has been assisting with the piling – noticeable by the branding “Quinns” written on it’s mast – as well as the large crane. Smaller cranes will be brought onto site to support with the remaining works.

• The delivery which we were anticipating arriving from the end of February will no longer be transported via Combwich Wharf. Therefore as there is no immediate demand for the bypass lane, which was mentioned at the Parish Council meeting earlier this month, those works have been put on hold. The weekend works to improve the Dolphin structures have also been postponed.
How to keep in touch

We are grateful to the parish for your continued patience and support.

If you would like to keep up to date on the works taking place, the best way to do so is via this monthly update. If you would like to be automatically sent a copy, please get in touch on the details below and let us know.

Alternatively, if you have any questions regarding the works please do let us know and we’ll be happy to help.
