

EDF Energy

A smarter future

Item 1	Content/script
	<p>Currently most of our homes in Britain still have gas and electricity meters using out-dated technology designed decades ago which is why we still have to live with meter readings, estimated bills and confusing prices. All of which means it's very hard to see what we're using and what we're spending. Smart meters are changing this. Gas and electricity suppliers across the country are replacing our existing meters with smart meters and an in-home display. Installed at no extra cost - they allow us to see in near real time how much gas and electricity we're using in pounds and pence. Smart meters can help you understand how a few simple changes around the home can reduce your energy and lower your monthly bill. Arrange an appointment with your energy supplier and they will send a trained installer to fit your new meter and show you how to get the most out of it. Join the millions of people enjoying the benefits of smart meters. Contact your energy supplier today about getting your smart meter, at no extra cost.</p>
