

# 10 ways to get the circular edge

Unlock your circular economy potential through energy solutions

There's a growing movement of businesses that are re-shaping the way they are driving growth. They're leaving behind the make-use-waste way of driving profit. Instead, they're going circular with an approach that repairs, re-uses and recovers - and they're starting with their energy.

By changing the way they buy, manage and even sell power, they're driving not just sustainability, but profitability. They're giving their businesses the circular edge. And you can too, one change at a time.

To get you started, here are **10 energy changes** you can make right now.

## Boost your Efficiency

**1 PowerReport for easy insight**

**One change:** Get a fast remote audit and report so you can see how much energy you're using across your business. And where, how and how much you can save.

**2 PowerNow for live insight**

**One change:** Get a live digital dashboard connected to smart monitors throughout your business' sites, assets and processes to pinpoint and track your business' energy saving opportunities.

**3 Turn waste into bio-energy**

**One change:** Turn carbon-rich, organic waste into renewable biofuel to heat and power your business and cut costs with your own renewable energy source.

**4 Switch to renewable energy**

**One change:** Switch to a contract backed by certified renewable sources so every unit of energy you buy is matched with low carbon sources so you report your zero emissions and support the uptake of renewables.

**5 Go Blue for Business**

**One change:** Opt for a Blue for Business contract with EDF Energy to back your energy with guaranteed, low carbon, nuclear power to report your zero emissions with zero extra cost.

**6 Make your own renewable energy**

**One change:** Take the fuel mix into your own hands by generating your own energy and reduce your energy supply costs, hit carbon-reduction targets, and even create a revenue stream.

**7 Drive Electric**

**One change:** Move your fleet from diesel and petrol guzzlers to electric vehicles to reduce your mile-for-mile running costs and cut carbon emissions by 66%.

**8 Earn for being responsive**

**One change:** Sign up for Demand Side Response schemes and manage your assets via our platform PowerShift. Reduce your usage or self-generate your energy when called on by the Grid, so you save on your bill and earn extra revenue.

**DSR**

**10 Boost the value of your energy**

**One change:** Install a battery behind your meter so you can store cheaper or renewable energy to use later when it costs more to buy, or even sell it if you don't need it so you can drive maximum value from your energy.

**9 Use heat twice**

**One change:** Recover heat that's being wasted and give it a second life by heating or powering another part of your operations and you cut down your energy bills and carbon footprint.

**X2**

## Lower your carbon

## Flex to earn
