

EDF Energy

Learn about your in-home display

Item	Description
1	The smart meter display works with your smart meter to show you exactly how much electricity and gas you're using and how much it's costing. This makes it easier to see what simple steps you can take to bring your consumption and your costs down for example only fill your kettle with as much water as you need.
2	Your electricity usage is updated every 10 seconds and your gas usage updates every 30 minutes this simple traffic light system makes it easy to see how much you're spending. The green light means your energy consumption is low amber is medium and red means you're using the most energy so you might want to turn down or turn off some appliances where appropriate.
3	The upper screen shows how much energy you're using the gauge at the top shows your electricity consumption in pounds and pence. Or you can swap two kilowatt hours using the info icon change to gas or combined fuel cost and you'll see this works in just the same way. You can also keep an eye on your tariff prices by scrolling through the menu with the info button.
4	<p>For previous energy use press the back arrow you can see how much you've spent over the last day week month or year all at the touch of a button. You can find lots of other useful features here in the menu. Now you're ready to place your display somewhere you can easily see it and start to change the way that you use energy.</p> <p>EDF Energy feel better energy.</p>
