

**"I work with large industrial and commercial customers to develop a fully funded turnkey solution for Behind-the-Meter Solar. I love that my role is directly making a difference for the planet!"**

Aimee Williams, Renewables Commercial Graduate

## What experience will I gain during the Renewable Energy Commercial programme?

During our three-year programme you'll develop your commercial understanding of the renewable energy industry and undertake assignments to support the provision of commercial, strategic and analytical advice to internal stakeholders.

## What kind of placements will I complete?

Our programme is designed to help you develop a broad set of skills, with the opportunity to specialise towards the end of the programme when you'll start to think about a permanent role.

Following a week-long induction with graduates from all of our schemes in September, you'll head straight to your first placement.

In years 1 and 2, you'll complete placements in our Strategy and Analysis and our Development teams. You'll gain an understanding of the key aspects of project development, such as origination, project management and valuation, all of which is geared toward reaching investment decisions on wind, battery and solar assets.

Our **Strategy & Analysis** function is at the heart of what we do. The team continually look for ways the organisation can make efficiencies to ensure competitiveness in the market to allow for project bids to be successful. The strategy of the business is created over the short, medium and long-term to support financial investment decisions and to create market contracts such as corporate power purchase agreements with some big high street brands.

The **Development** function allows the business to realise its objectives. Driving forward ambitions created against the business strategy, the team is responsible for taking projects from concept through the development cycle to financial close and then acting as client throughout the construction phase. You'll see some exciting press releases on our [website](#) around a host of projects being commissioned by our development experts!

In year 3, you'll undertake an assignment which is tailored to your skills, knowledge and experience to ensure your transition post-scheme is seamless into a role within the organisation.

## EDF Renewables UK & Ireland

The UK and Ireland needs new, affordable low-carbon electricity. As one of the UK and Ireland's leading renewable energy companies, EDF Renewables specialises in wind power, solar and battery storage technology.

We develop, build and operate renewable technologies throughout their lifetime. We currently have an operational portfolio of 36 wind farms (including two offshore wind farms) and we have an ambitious vision for solar and battery storage.

EDF Renewables is a joint venture between EDF Renewables Group (EDF's global renewable business) and EDF Energy (EDF's UK generation business).
